Profiles

HarishDaga

Harish Daga

Summary

Motivated data analyst skilled in Python, SQL, and data visualization. Experienced in analyzing datasets, uncovering trends, and delivering insights to support business decisions. Passionate about continuous learning and solving real-world problems with data

Experience

Livspace **Aug - 2025**

Data Analyst Intern Bengaluru

https://www.livspace.com

- Query data using **AWS Athena** to generate insights and support business decisions.
- Develop and maintain interactive dashboards in **Amazon QuickSight** for KPI tracking and reporting.
- Perform data cleaning, transformation, and validation to ensure accuracy and reliability.
- Utilize **Boto3** to automate workflows and streamline data processes on AWS.

Key Skills: SQL, AWS Athena, Amazon QuickSight, Boto3, Python, Data Cleaning, Data Visualization

Siya Ram Interiors **Jan 2018 - Feb 2023**

Project and Financial Data Coordinator Coimbatore, Tamil Nadu, India

- Managed project billing and maintained financial records with 100% accuracy, streamlining reporting processes.
- Optimized site resource allocation and worker scheduling, reducing project delays by 15%.
- Prepared detailed reports to help supervisors make informed decisions.

Certifications

Coursera Google Data Analyst Professional **Sep 2023**

Coursera

Proficient in data visualization, machine learning, and big data analytics using tools like Google BigQuery, TensorFlow, and Google Data Studio.

Datacamp associate data analyst **Mar 2024**

Datacamp

Mastering essential data analysis skills using **Python**. Proficient in data manipulation, visualization, and basic statistical analysis techniques using libraries like **Pandas, Matplotlib,** and **NumPy**.

Skills

Programming Languages: Python (Pandas, NumPy, Matplotlib, Seaborn)

Databases: SQL, MySQL, PostgreSQL

Data Visualization: Tableau, Power BI, Excel

Machine Learning Frameworks: Scikit-learn

Others: ETL Processes, Data Cleaning, Feature Engineering

Projects

Dubai Property Trends Web App

Developed an interactive web application using Streamlit to analyse Dubai's real estate trends.

Streamlit

- Performed **data cleaning**, preprocessing, and feature engineering to ensure high-quality datasets.
- Built and deployed machine learning models, including **Gradient Boosting**, to predict property trends and provide actionable insights and Achieved 85% prediction accuracy in Dubai property trends.
- Hosted the application on Streamlit Cloud for global access and real-time interaction.

SleepDisorderAnalysis

- Analyzed SleepInc dataset comprising 374 individuals' sleep and lifestyle metrics over a 6-month period.
- Conducted rigorous data cleaning, addressing data types, column names, and duplicate entries.
- Performed exploratory analysis on demographics, sleep metrics, and occupational trends within the dataset.

BankChurnPredictor

- Built data pipeline for bank customer churn prediction.
- Applied Logistic Regression, Decision Tree, Random Forest, and XGBoost classifiers to improve retention strategies.
